CCS indispensable for reaching climate targets: CO2 infrastructure for public good

Radically reducing CO2 levels is vital to tackling climate change and CCS is the only established measure that tackles both large industrial emissions and enables the development of carbon negative solutions. With industries and governments as main contributors, the discussion will explore ways in creating safe, well-regulated and highly efficient CO2 networks that work for communities, employers and the climate.

Speakers include: representatives from Heidelberg Cement, Norway and Port of Rotterdam.

Monday 6 November, 10:00 AM - 11:30 AM, EU Pavilion, Bonn Zone

Organised by: The Bellona Foundation CO2 GeoNet Association; Carbon Capture and Storage Association (CCSA); European Energy Research Alliance (EERA CCS); Global CCS Institute (GCCSI); IEA Greenhouse Gas R&D Programme

Green public procurement in practice: demand and supply of low-carbon building materials and transportation

Green public procurement (GPP) is a key tool public authorities can use to build trust in and stimulate demand for low- and zero-emission technologies. This event takes a closer look at the role of GPP in boosting demand and supply of low-carbon building materials and transportation.

Speakers include: Oslo City Councilor, representatives from public property manager Omsorgsbygg and Bellona Europa.

Tuesday 7 November, 10:00 AM - 11:30 AM, Nordic Pavilion, Bonn Zone

Organised by: The Bellona Foundation

CCS developments towards a 1.5°C world: will they help the oceans and Small Island Developing States?

This official UNFCCC side event touches upon CCS infrastructure to achieve 1.5°C and how green politicians see the societal case for CCS.

Speakers include representatives from Trinidad and Tobago, City Council of Oslo, Gassnova and Bellona Europa.

Tuesday 7 November, 11:30 AM - 13:00 PM, Meeting Room 2, Bonn Zone

Organised by: The Bellona Foundation, University of Texas at Austin & Carbon Capture and Storage Association (CCSA)

Decarbonising and electrifying road transport: how to accelerate demand and supply of electric vehicles?

The event gathers electric vehicle manufacturers , infrastructure providers and civil society in the discussion around Euopean transition towards cleaner transport and boosting demand for electric mobility.

Speakers include representative from City Council of Oslo, ABB, Siemens and Bellona Foundation.

Saturday 11 November, 10:00 AM - 11:30 AM, EU Pavilion, Bonn Zone

Organised by: The Bellona Foundation, Transport & Environment, Nature and Biodiversity Conservation Union (NABU)

Greenhouse gas mitigation in the waste sector with composting, enhanced MRV systems and CO2 capture

In rapidly urbanizing world, solid waste management and GHG reductions are key challenges facing all the world's cities. This side event explains the role of waste in Oslo's and Peru's climate strategies and presents different technologies for mitigation.

Speakers include: Governing Mayor of Oslo and representatives from City of Gothenburg and the Ministry of Environment in Peru.

Saturday 11 November, 13:00PM - 14:30PM , Nordic pavilion, Bonn Zone

Organised by: The Bellona Foundation and Nordic Working Group for Global Climate Negotiations (NOAK)

Taking the Electric Revolution to the Seas

Nordic countries - Norway in particular- have during the last three years experienced a surge in newbuilds and orders for ships powered by batteries. This session will explain how policy frameworks and green procurement practices have fostered the establishment of maritime battery production and a massive electrification of ferries.

Speakers include representatives from Wartsila, tour operator The Fjords, Yara International, battery manufacturer PBES and The Bellona Foundation.

Wednesday 15 November, 12:30 PM - 13:25 PM, Nordic Pavilion, Bonn Zone

Organised by: The Bellona Foundation and Nordic Energy Research (NEF)

Policy coherence in electric infrastructure on land and at sea: plugging into a cleaner, cheaper and more climate friendly mobility system

Ensuring compatible technologies and setting common standards are key to kick starting Europe's electric revolution. But the market is changing fast. This calls for a fine balance between standardisation and leaving room for innovation. This event will highlight infrastructure needs, synergies between land and sea transport infrastructure, and policy coherence.

Speakers include representatives from ferry company Color Line, battery manufacturer PBES, Wartsila, Nordic Council and Bellona Europa.

Thursday 16 November, 13:30 PM - 15:00 PM, Nordic pavilion, Bonn Zone

Organised by: The Bellona Foundation and Nordic Council

BELLONA

Works on these key topics:

CO2 capture and storage
Clean transport
Arctic issues
Nuclear safety
